PROFESSIONAL SUMMARY

Software Engineering graduate (BEng Hons, Data Science extension, Taylor's University, Malaysia) with hands-on full-stack development experience and proven technical leadership as Capstone Project Lead on an AI-powered clinical diagnostic platform. Skilled in object-oriented design, Agile/Scrum delivery, and applying machine learning and data-driven methods to real-world problems spanning healthcare, e-commerce, and immersive technology. Experienced in delivering production features across UI, API, and database layers. Seeking to leverage expertise in software architecture, scalable web platforms, and data engineering to drive high-impact technical solutions.

EDUCATION

Taylor's University, Malaysia

2023 – 2026

Bachelor of Software Engineering (Hons), Extension in Data Science

- **Key focus areas:** Advanced Data Modelling, Data Mining, Big Data Technologies, AI Integration, Predictive Analytics
- **Engineering core:** Full-lifecycle development using Agile/Scrum, Object-Oriented Design (OOD), and Software Architecture
- **Technical excellence:** Software Quality Assurance, automated testing, debugging, and system scalability
- **Relevant coursework:** Human-Computer Interaction (HCI), Ethical Software Engineering, Database Management Systems (SQL)
- **Academic distinction:** Dean's List across multiple semesters (2023 – Present); Postgraduate scholarship for innovative invention

WORK EXPERIENCE

Full-Stack Developer | 7-Eleven Sdn Bhd

Apr 2025 – Aug 2026

- Developed and maintained frontend and backend features for an internal business platform using React.js, Next.js, Node.js, and PostgreSQL.
- Diagnosed and resolved cross-stack bugs across UI, API, and database layers to ensure platform reliability.

Student Helper | VORTEX Lab

2025

- Provided technical support and facilitated student engagement with Virtual Reality technology.
- Troubleshoot real-time hardware and software issues.

KEY PROJECTS

SpeakTrum – Early Detection of Parkinson's Disease

Capstone Project | Team Leader

- Led a cross-functional development team building an AI-powered platform for early-stage Parkinson's disease detection through vocal biomarker analysis.
- Directed system architecture design, project milestones, and machine learning model development to achieve high-accuracy diagnostic outputs.

Internal E-Commerce Platform

Industry Project | Developer

- Developed merchandising features spanning product data, promotions, and inventory workflows using React.js, Next.js, TypeScript, .NET Core, and REST APIs.
- Diagnosed and resolved backend data-binding and integration issues in file upload and reporting workflows using .NET Core, PostgreSQL, ASP.NET Core, and Git.

Monere Reminiscence Therapy

XR Jam Hackathon | Developer

- Built an immersive VR experience using Unity and C# to support reminiscence therapy for patients with cognitive impairment.
- Focused on emotional design and intuitive 3D interaction to improve patient engagement and well-being.

TECHNICAL SKILLS

Languages: Java, Python, SQL, C#, Node.js, React.js, Next.js, TypeScript

Technologies: Unity (XR/VR), AWS, Big Data, IoT, Git, Flutter, Azure DevOps

Data & AI: Data Modelling, Data Mining, Predictive Analytics, AI Integration

Methodologies: Agile Team Leadership, Scrum, Object-Oriented Design, Software Architecture, System Design

Specialised: UI/UX Design (HCI), Software Testing

Languages Spoken: English (Fluent), Bangla, Hindi

CERTIFICATIONS & ACHIEVEMENTS

- **Best Idea Award, Top 3 Finalist:** UG Research Idea Pitch Competition (RNIF 2025), Taylor's University
- **AWS Cloud Practitioner Essentials:** Amazon Web Services (AWS)
- **Java Programming Course:** Oracle Academy
- **Cisco Networking Academy:** Introduction to Packet Tracer, Exploring IoT with Packet Tracer, Exploring Networking with Packet Tracer, Getting Started with Packet Tracer
